

**REDEFINING
NUTRIENT
DELIVERY**

FILtechnology™

ENHANCE. OPTIMIZE. SUSTAIN.

INNOVATION REALIZED:

Step into a new epoch of nutrient delivery with our pioneering Fiber Interlaced Liposomal (FIL) technology. This isn't just a transformation - it's a profound paradigm shift in nutrient delivery, where the fluid charm of liposomes is reimagined into a new, more robust powdered form.

NATURAL INTEGRITY

The resilience of nature's soluble dietary fibers, derived from the richness of citrus and apple, serve as the foundation for FIL. These fibers secure the liposomal structure, preserving its architectural integrity and efficacy, even in its transposed powdered form.

A DELICATE DANCE

Within the heart of FIL technology, a delicate equilibrium occurs. It perfectly modulates the water-loving and fat-loving affinities of essential nutrients, enhancing their stability and magnifying their bioavailability. This harmony between form and function assures a sustained and potent release of biomolecules.

The FIL Advantage

ENHANCED STABILITY

Secures the potency of nutrients, ensuring longevity.

OPTIMIZED BIOAVAILABILITY

Ideal harmony of water & fat-loving properties ensures nutrient availability.

SUSTAINED RELEASE

Gradual release of nutrients provides lasting benefits.
